## WORK EXPERIENCE

### iOS Developer -Intern

06/2019 to 06/2020

Mast Global - A wholly owned division of L Brands

Bangalore

As an Intern, I got an opportunity to work on these two projects. The Feedback App that I've worked on is live there in the company and is used by more than 500-600 employees.

#### **Name of Project: - Mastilicious Cafe Feedback App**

**Abstract of Project:** - A feedback app project made with an idea of maintaining a track on the meals that the employees of the company are having so that there will be a less wastage of food along with providing much healthier food. For this, the Facilities team of the company (that I've been a part for a whole year) requires data and feedback or reviews from the employees and for this reason, this feedback app was introduced.

#### **Name of Project: - A Brief Study on Carthage & Swift Package Manager**

**Abstract of Project:** - This project is completely research based in which I have been assigned to study about the two dependency managers i.e. Carthage and Swift Package Manager (SPM). After getting an idea of what role they are playing in every project, next was to check and try implementing whether we can shift from Carthage to Swift Package Manager for the company's ongoing project. Is it beneficial to use Swift Package Manager rather to use Carthage?

### International Industrial Training - Intern

06/2017 to 08/2017

JK Cement Works Fujairah, Dubai (UAE)

Fujairah, Dubai (UAE)

Got a chance to work on SAP and was a member of Purchase Department in the company. The project assigned to me named Vendor Based Development in which made a list of all the third party vendors the company wants their items to be shipped from. This project will ultimately helps the Purchase Department to deal with a less ambiguous data and will be less time consuming.

### Developer

05/2020 to 07/2020

Defence Research and Development Organization [DRDO]

Jodhpur, Rajasthan

Worked on a project named "Tracking System". In the Defence Lab, there is a restriction when it comes to the usage of Internet. My contribution over there was to develop an offline map in which whenever someone mentions about the Latitude and Longitude, it will directly take them to the respected location in the map.

## PROJECTS

### Information Extraction from Micro-blogs using Text Mining

**Abstract of project:** -With rapid growth in users of Social media in the past few years, we have witnessed an increased interest in micro-blogs as a hot research topic in the domain of sentiment analysis of people or a particular product or event. Sentiment analysis deals with identifying and classifying opinions or sentiments expressed in source text. The main objective of this project is “to extract the information from micro-blogs about Demonetization in India which will help us in the better understanding of the mindsets of people”.

### Netnography

**Abstract of project:** - This project describes about the concept of Netnography which means the study of online communities. The main objective of this project is to get an insight into this topic. In this project, we used the survey method to get an insight about the online communities. Therefore, future scope of this project is to observe the online communities by becoming a member of the online community or by participating in the discussion as a member to get the true feelings of the online community on a topic.

### Wings

**Abstract of project:** - Wings is a complete research based project that covers all kinds of flying objects. This project is basically the study of the flying objects from when they were made to the time they were modernised. The aim of this project is to design and develop an autonomous flying platform. The secondary aim of the project takes into account the difficult nature of the task. Thus, in the interest of the future projects the work carried out during this project will be guided towards producing a system that can readily be further develop.

### Railway Reservation in Java

**Abstract of project:** - A simple form and database based project for train reservation using Java and MySQL. Got a chance to learn more about Java and MySQL.

---

## SKILLS

**Programming Languages:** Swift, C, C++, Java

**Mobile Development:** iOS Development

**Web Based Technologies:** HTML, CSS, JavaScript, PHP

**Database:** MySQL Server, SQL Server Management Studio, Oracle Server

**Cloud Computing Service:** Microsoft Azure

**Data Visualization Tool:** Power BI

---
